Read about the effects of chlorine on the brain. A heavy metal that's particularly toxic to the central nervous system, Chlorine is
particularly toxic to children. Chlorine is, in fact, highly toxic to the brain. The reason is that the human brain is extremely
vulnerable to damage caused by chlorine. Chlorine gas is harmful to the nervous system, and is the leading cause of death due to
poison in United States. Hydrochloric acid (HCl) plays a vital role in the human body. It is secreted by the parotid glands and the
digestive system. Hydrochloric acid is also present in small amounts in saliva. Hydrochloric acid (HCl) plays an important role
in the human body, and is extremely important. Hydrochloric acid (HCl) is also a corrosive and bactericidal, and is essential for
the body. The tongue is a part of the mouth that is shaped like a cone, and consists of several bones. It is a long, soft, thin piece
of tissue that extends from the roof of the mouth to the floor of the mouth. It is a part of the oral cavity. The tongue is part of
the upper jaw of a person, and is involved in mastication (grinding) and swallowing. Your teeth are covered with enamel and a
strong layer of hard, bony tissue called the dentin. This gives the teeth their hardness. Your teeth are where you bite food or
objects. They are also used to clean your teeth. Brushing the teeth with a toothbrush gives you the best cleaning. The heart is a
very important organ in the body. It is responsible for circulating blood around the body and transporting oxygen and nutrients.
The heart is made of muscular walls, which are lined with several chambers and valves. The chambers of the heart are the left
and right atrium, right and left ventricle. They are located in the upper part of the heart. The small blood vessels called arteries
and veins carry the blood away from the heart. The primary function of the heart is 82157476af
